AUDIT HOURS OF FOOTAGE IN MINUTES
FIND OUT HOW COM-SUR, THE BEST
'MOUSETRAP' WILL HELP

["Seeing is believing - See what the camera saw"](#)

CCTV and other forms of video surveillance are commonly used by government agencies world over, but footage is often only reviewed reactively. Our company realized this problem early-on and has developed the world's only CCTV video footage auditing software that encourages daily auditing (hours in minutes) of CCTV footage, filling the gap for a complete "workflow". The software works with existing cameras and VMS, regardless of type/brand, and provides a standardized approach for intelligent incident reporting. Our software also offers exceptional investigative capabilities.

'COM-SUR' – THE WORLD'S ONLY
CCTV/SURVEILLANCE VIDEO FOOTAGE
AUDITING, SMART BACKUP, AND
STANDARDIZED INTELLIGENT INCIDENT
REPORTING SOFTWARE – THE MISSING PIECE
OF CCTV/SURVEILLANCE VIDEO

COM-SUR is the world's only CCTV/surveillance video footage auditing, smart backup, and standardized intelligent incident reporting software that serves as a complete workflow and force multiplier. It helps audit 24 hours of footage in minutes, reduces data size, creates standardized intelligent reports, and delivers business intelligence. COM-SUR helps unlock hidden information in CCTV/surveillance video footage and enables people to gain actionable intelligence, improve homeland security, prevent crime and losses, identify and mitigate threats and hazards, and improve operational efficiency. It empowers people to gain new jobs as CCTV/surveillance video footage auditors and start new businesses of auditing video footage. Like MS Office, COM-SUR is an enabler that makes it easy to work with CCTV and other surveillance cameras in a standardized way, leading to better decision-making. It also offers exceptional investigative capabilities.

HOW COM-SUR SMARTLY REDUCES 'VIDEO'
STORAGE SIZE

COM-SUR employs an innovative approach to

smartly reduce the amount of video to be audited and consequently the storage size of videos. Regardless of the video's frame rate, COM-SUR captures a single image of the consolidated 'moment' of 'that' one second, when the I, P, and B frames come together. This method significantly reduces data size without sacrificing vital information. It goes without saying that when multiple cameras are displayed in a grid view, say 4x4, the storage size is further reduced since all the cameras are captured as a single image. Since no suggestion is being made to replace the actual video with images, COM-SUR acts as a wonderful supportive technology both to audit (review) just 86400 frames representing 24 hours and reducing the data size at the same time.

WHY AUDITING IS IMPORTANT FOR A NATION'S GOVERNANCE

Governance is defined as the sum of all the processes of governing, undertaken by the government of a state, by a market, or by a network over a social system (family, tribe, formal or informal organization, a territory or across territories) and through the laws, norms, power or language of an organized society. It includes activities that ensure a public sector entity's credibility, establish equitable provision of services, and assure appropriate behaviour of government officials thereby reducing the risk of public corruption.

Auditing is the foundation of good public sector governance. Auditing helps public sector organizations achieve accountability and integrity, improve operations, and instil confidence among citizens and stakeholders help by providing unbiased, objective assessments of whether public resources are managed responsibly and effectively to achieve

intended outcomes. The public sector auditor's role complements the governance responsibilities of oversight, insight, and foresight. Oversight checks whether public sector entities are doing what they are supposed to do and serves to detect and deter public corruption. Insight helps decision-makers by providing an independent assessment of public sector programs, policies, operations, and results. Foresight recognizes trends and emerging challenges. In order to fulfil each of these roles, auditors employ tools such as financial audits, performance audits, investigations, and advisory services.

It is well-accepted that public trust is a vital part of an effective governance. However, several recent studies by the Organization for Economic Co-operation and Development (OECD) (<https://www.oecd.org/>) portray a dramatic decline in public trust in national governments worldwide. This decline could lead to serious implications for governments around the world. In this context, experts have concurred that auditing how the government is functioning, and how is it allocating its resources, and making the audit reports accessible, would greatly help to rebuild trust with the public.

SUPREME AUDIT INSTITUTIONS – THEIR VALUE AND BENEFITS IN MAKING A DIFFERENCE TO THE LIVES OF CITIZENS

Supreme Audit Institutions (SAIs) are the topmost audit institution of a country. They are known mainly for their role in overseeing the management of public finances, i.e., government revenue and expenditure. Many SAIs also carry out an audit of public entities' compliance with rules and regulations, and the performance of government programs and policies. By scrutinizing public financial

management and performance, SAIs provide assurance that public resources are used prudently and efficiently for the benefit of the citizens.

The International Organization of Supreme Audit Institutions (INTOSAI) is an intergovernmental organization having 193 members who are Supreme Audit Institutions in their respective countries (for example, the Comptroller and Auditor General of India is the Supreme Audit Institution of India, the Government Accountability Office of the United States, and so on). INTOSAI has released a set of principles christened INTOSAI-P 12 which emphasise that the extent to which a Supreme Audit Institution (SAI) is able to make a difference to the lives of citizens depends on the SAI.

https://www.intosai.org/fileadmin/downloads/documents/open_access/INT_P_11_to_P_99/INTOSAI_P_12/INTOSAI_P_12_en_2019.pdf

These principles are summarised as follows:

Principle 1: Safeguarding the independence of SAIs.

Principle 2: Carrying out audits to ensure that government and public sector entities are held accountable for their stewardship over, and use of, public resources.

Principle 3: Enabling those charged with public sector governance to discharge their responsibilities in responding to audit findings and recommendations and taking appropriate corrective action.

Principle 4: Reporting on audit results and thereby enabling the public to hold government and public sector entities accountable.

Principle 5: Being responsive to changing environments and emerging risks.

Principle 6: Communicating effectively with stakeholders.

Principle 7: Being a credible source of independent and objective insight and guidance to support beneficial change in the public sector.

Principle 8: Ensuring appropriate transparency and accountability of SAIs.

Principle 9: Ensuring good governance of SAIs.

Principle 10: Complying with the SAI's Code of Ethics.

Principle 11: Striving for service excellence and quality.

Principle 12: Capacity building through promoting learning and knowledge sharing.

CHALLENGES FACED BY GOVERNMENT AGENCIES

1. Terrorism:

Government agencies are often targets of terrorist attacks due to their role in enforcing laws and policies. Attacks may be aimed at specific government buildings, such as courthouses or legislative offices, or at high-profile events or individuals.

2. Unauthorized access:

Government agencies need to ensure that only authorized personnel are allowed inside their

premises, and that visitors do not have access to restricted areas.

3. Espionage:

Government agencies often deal with sensitive and classified information, making them targets for espionage activities, especially by foreign intelligence agencies.

4. Threats to critical infrastructure:

Government agencies are responsible for maintaining critical infrastructure, such as power grids, nuclear plants, water treatment plants, bridges, airports, ports which need to be protected from various threats like terror attacks, vandalism, arson, sabotage, and so on.

5. Insider threats:

Government agencies have to deal with insider threats from disgruntled employees or even unwitting staff who fail to follow proper security and safety measures.

6. Disaster management issues:

In the wake of a disaster, natural or otherwise, government agencies need to assess the same and plan and implement rescue efforts accordingly.

7. Compliance issues:

Government agencies need to comply with various regulations and guidelines.

8. Humongous growth of surveillance video:

The exponential growth of surveillance cameras has resulted in an unprecedented surge in

surveillance video. Effectively managing this data has become a daunting challenge due to the massive storage capacity required, especially considering the prolonged retention periods necessary for security, incident investigation, or legal purposes. Furthermore, the prevalence of high-resolution video with increasing megapixels compounds the storage demands, making efficient data management an urgent priority for organizations grappling with the immense volume of surveillance footage.

USE OF VIDEO SURVEILLANCE BY GOVERNMENT AGENCIES

Government agencies use video surveillance to monitor a wide range of areas, depending on their specific responsibilities and priorities. Here are some examples of areas that government agencies may monitor using video surveillance:

1. Public spaces:

Government agencies may use video surveillance cameras to monitor public spaces, such as parks, streets, and other areas where people gather, in order to check for public safety issues, identify criminal activity, and respond to emergencies.

2. Transportation hubs:

Transportation hubs, such as airports, train stations, and bus terminals, are monitored using video surveillance for security threats, identifying potential safety hazards, and ensuring the efficient flow of traffic.

3. Government facilities:

Government facilities, such as courthouses,

municipal buildings, and military installations, are monitored using video surveillance, for security threats and responding to emergencies.

4. Border crossings:

Border crossings are monitored using video surveillance to help prevent illegal immigration, drug trafficking, and other security threats.

5. Critical infrastructure:

Critical infrastructure, such as power plants, nuclear plants, water treatment facilities, and communication networks, may be monitored using video surveillance to help prevent sabotage, accidents, and other security threats.

6. High-risk areas:

Government agencies use video surveillance to monitor high-risk areas, such as prisons, military zones, and areas prone to natural disasters for various threats and responding to emergencies.

7. Disaster management:

Government agencies use video surveillance for disaster management in several ways such as follows:

- a. Real-time situational awareness during a disaster to assess the extent of damage and areas that require immediate attention.
- b. Aiding emergency response efforts by obtaining critical information about the disaster and the movement of people and vehicles.
- c. Post-disaster analysis to assess the impact of a disaster and determining rescue efforts.

d. Monitoring public safety during a disaster.

Further, in a government facility, various areas may be monitored using video surveillance, depending on the specific facility and its security needs. Here are some common areas that are monitored:

- Entry and exit points
- Public areas
- Restricted areas
- Computer/Server rooms
- Hallways and corridors
- Stairwells and elevators
- Parking areas

Besides CCTV cameras, government agencies also use other forms of video surveillance as follows:

1. Drones:

Government agencies use drones to monitor their premises from the air which is useful for identifying security threats, monitoring for suspicious behavior, and responding to emergencies. Drones are also be used to inspect hard-to-reach areas, such as rooftops or other elevated structures.

2. Body worn cameras:

Government agencies usually equip their personnel with body worn cameras to capture video footage of their interactions with the public. Body worn cameras can be useful for

documenting incidents, providing evidence in legal proceedings, and promoting transparency and accountability.

3. Dash cams:

Government agencies use dash cams in their vehicles to capture video footage of traffic stops, pursuits, and other interactions with the public. Dash cams are useful for documenting incidents and providing evidence in legal proceedings. They also help in promoting transparency and accountability.

LIVE MONITORING – CHALLENGES

Most government agencies have a dedicated control room with operators, set up for live monitoring of CCTV cameras as well as other cameras such as drones, body worn cameras, dash cams etc. However, live monitoring comes with its own set of challenges of video blindness, poor attention span, boredom, operator bias, false alerts, and so on.

Moreover, these cameras continuously capture and record humungous amounts of video data. It therefore becomes a daunting task for the operators to review and analyse this data whenever the need arises. Thus, it may be noted that benefits from video surveillance systems can accrue only when they are used optimally, suggestions for which are enumerated further on, in this document.

COMPLIANCE - GENERAL

Conformity or compliance in any organization means adherence to laws and/or rules and regulations, various standards, as well as data storage and security requirements as laid down by government bodies, governing bodies of the respective industry, or the management of the

organization. When an organization complies with the requirements mandated by government and/or governing bodies, then it is termed as 'regulatory compliance' which enables the organization to run in a legal and safe manner.

COMPLIANCE - AUDITS

Several organizations carry out compliance audits on a regular basis to avoid the potential consequences of non-compliance. A compliance audit examines how well an organization adheres to compliance requirements. Some organizations use video surveillance to monitor compliance issues and audit recorded video footage from time to time for investigating and preventing compliance issues. Auditing video provides actionable insights on the level of compliance within the organization.

AI - HOW TO MAKE IT MORE EFFECTIVE

The solution to making AI more effective lies in continuous learning from real-world incidents through post-event auditing. COM-SUR provides exactly this capability, enabling AI models to evolve based on audit findings and incidents that go beyond real-time detection. By auditing daily footage, capturing exceptions, and feeding this data back into AI models, the accuracy of AI systems can be significantly improved, helping to reduce false alarms and enhance detection capabilities.

Auditing ensures that AI learns from what might have been missed in real-time, allowing it to adapt to the unique requirements of different environments. Whether it's improving facial recognition accuracy or refining anomaly detection, this continuous feedback loop

makes AI smarter and more reliable over time.

However, it's essential to recognize that AI, like any automated technology, can only perform tasks it's programmed for. It cannot account for every possible scenario or exception, leaving certain areas outside its programmed scope. This is why human intelligence and intervention will always play a vital role in verifying and refining AI outcomes.

“CCTV AND OTHER FORMS OF VIDEO SURVEILLANCE ARE NOT ENOUGH – WE MAKE IT WORK FOR YOU”

While it is not being suggested that optimal usage of video surveillance can cure all issues, several issues of the following kind can be addressed by doing just a little 'more' with respect to making the optimal use of video surveillance systems:

- Recces/suspicious movements/activities
- Insider job/security lapses
- Bullying/violence/disputes
- False allegations and/or claims
- Sexual harassment and/or other kinds of abuse
- Unauthorized/unlawful activities
- Fraud/loss/theft
- Employee performance issues
- Compliance issues
- Disaster management issues

- Intrusions, especially by animals
- Inattentive staff (e.g. guard sleeping)
- Housekeeping issues
- Cameras/recorder malfunctions

So, what is the 'more' that needs to be done?

1) AUDIT CCTV AND OTHER SURVEILLANCE VIDEO FOOTAGE DAILY AS A STANDARD OPERATING PROCEDURE

'Auditing' means 'seeing' what the cameras 'saw'. Auditing of CCTV and other surveillance video footage should be done daily (continuous investigation) to identify potential issues and threats. Auditing is a dedicated and systematic process that helps address challenges related to live monitoring and alert-based systems. Auditing helps in evaluating analyzing incidents to improve existing policies, procedures, and processes. Concerned personnel should be trained to become video footage auditors, and the audit teams should be rotated to avoid complacency/collusion. Daily auditing of CCTV and other surveillance video footage can also help in adhering to the principles of Kaizen and TQM for business improvement.

2) DOCUMENT AUDIT FINDINGS/INCIDENTS

Audit findings/incidents should be documented in a standardized template to find the root cause to prevent future recurrences. Historical data of such findings/incidents can reveal patterns that can help take better informed corrective and preventive action. If all government agencies report incidents in a standardized template, relevant authorities can derive business intelligence from the data and

take action for the collective benefit of all concerned stakeholders.

3) ENSURE DISASTER RECOVERY OF CCTV AND OTHER SURVEILLANCE VIDEO FOOTAGE – LIKE A ‘BLACKBOX’

CCTV and other surveillance video footage must be stored at multiple locations in order to ensure that even if the recorder/storage device is stolen, destroyed or tampered with the data is never lost. Further, any backed-up data must easily be searchable and retrievable; else, it is going to be a nightmare finding the relevant video.

4) DISPLAY DYNAMIC INFORMATION AT RELEVANT PLACES

Document and display details of information that is dynamic in nature in relevant areas. For example:

1. List of authorised personnel working in the government agency’s premises.
2. List of authorized security personnel deployed at the government agency’s premises.
3. List of habitual offenders/suspects likely to visit the government agency’s premises (a ‘Watch out’ list).

5) USE A POWERFUL NEW SIGNAGE

"WE AUDIT CCTV VIDEO FOOTAGE EVERYDAY".

One size, one color, one powerful message. Across the nation.

DE-CENTRALIZED SURVEILLANCE + CENTRALIZED SURVEILLANCE = OPTIMAL RESULTS

Organizations with multiple locations struggle with centralized video surveillance due to infrastructure cost, internet bandwidth, and operator limitations. De-centralized surveillance offers higher accountability at each location and better situational awareness, leading to more chances of discovering exceptions.

NEW SKILL – ‘CCTV VIDEO FOOTAGE AUDITOR’

In a groundbreaking move, the Ministry of Skill Development of India has established National Occupational Standards for the crucial skill of CCTV Video Footage Auditing. The Ministry of Education has also introduced a course to teach this skill to students in grades 11 and 12. This initiative will not only create new job opportunities and business ventures for those seeking a fresh career path but also for retirees from both the armed forces and the private sector. Additionally, this skill will help activate the millions of CCTV cameras currently underutilized, bringing them out of 'sleep mode' and enhancing their effectiveness.

AI WHERE YOU NEED IT, HI ALL THE TIME – THE AUGMENTED INTELLIGENCE MANTRA

The true power of COM-SUR lies in its ability to seamlessly integrate AI and Human Intelligence (HI) into a cohesive, Augmented Intelligence system. With COM-SUR, AI can be leveraged when needed to enhance analysis and generate insights, while HI remains at the core of the system’s operation, ensuring that the technology is always accessible, intuitive, and responsive to human needs. This balance

between AI and HI is what defines Augmented Intelligence, making COM-SUR a revolutionary tool that elevates the entire surveillance industry.

CONCLUSION

"You see, but you do not observe"—a famous quote by Sherlock Holmes in *A Scandal in Bohemia* (1891, by Sir Arthur Conan Doyle)—perfectly illustrates the need for human insight in surveillance. While computers can 'see,' it is human observation that truly interprets and acts on what is seen. COM-SUR simplifies and enhances this critical process, leading to more effective and insightful results.

"Cameras don't lie"—but how will you know unless you 'see' what the cameras 'saw'? Don't wait for things to go wrong. Start auditing your CCTV footage with award-winning COM-SUR today.

In closing, we present three guiding principles that will revolutionize video surveillance:

- 1. Auditing is fundamental—everything else is peripheral.**
- 2. Cameras have lenses—humans have eyes.**
- 3. Let's make cameras 'accountable.'**
